Movie Time

Service Layers

By: Hoda Saad

Welcome to Movie Time

Success! Welcome To Movie Time

Hello Movies

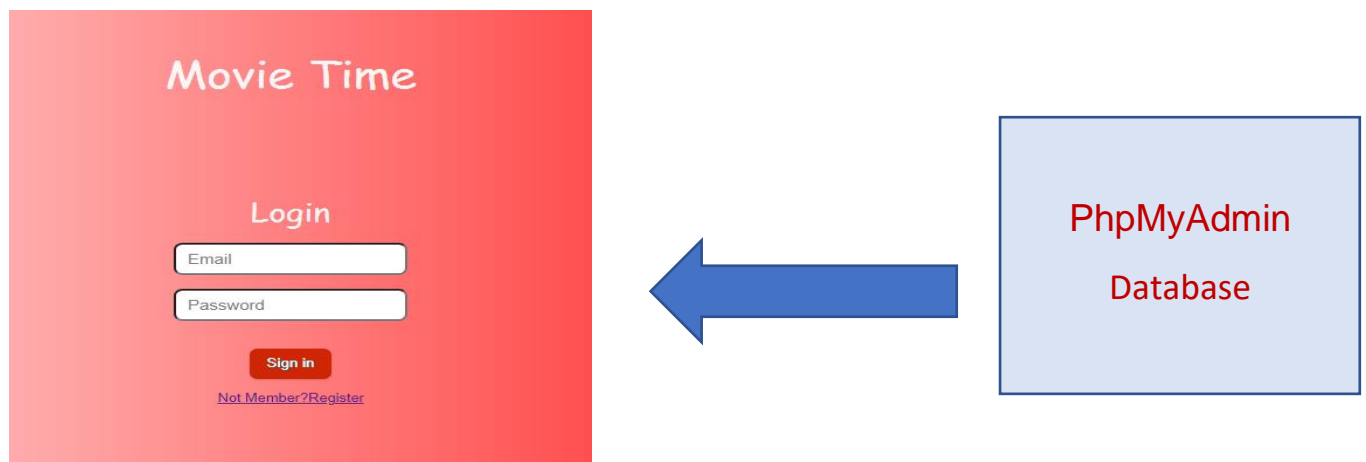

Overview

I will use notepad++ and xampp as tools for my web application. Also, a simple API which will call in order to create and manipulate data.

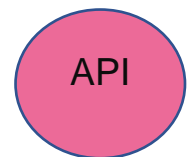

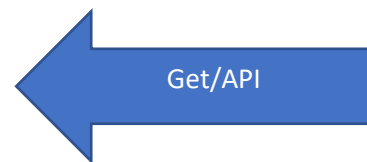

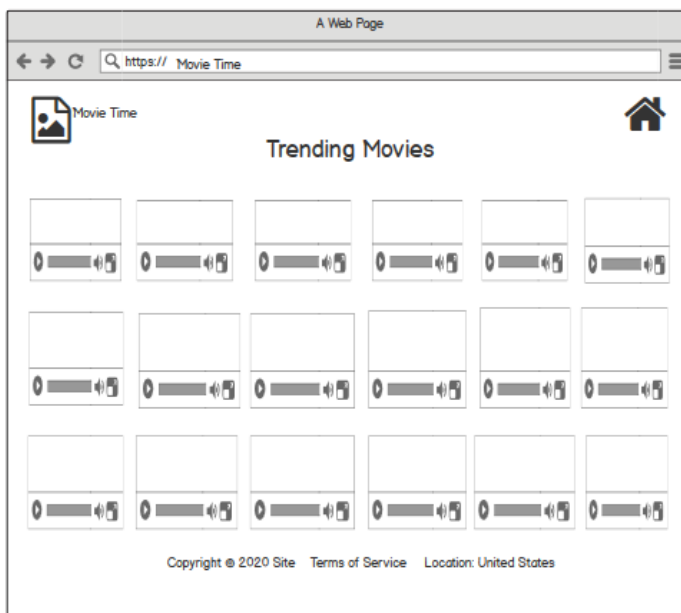

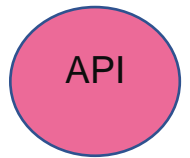

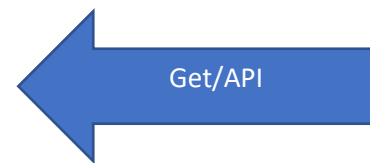

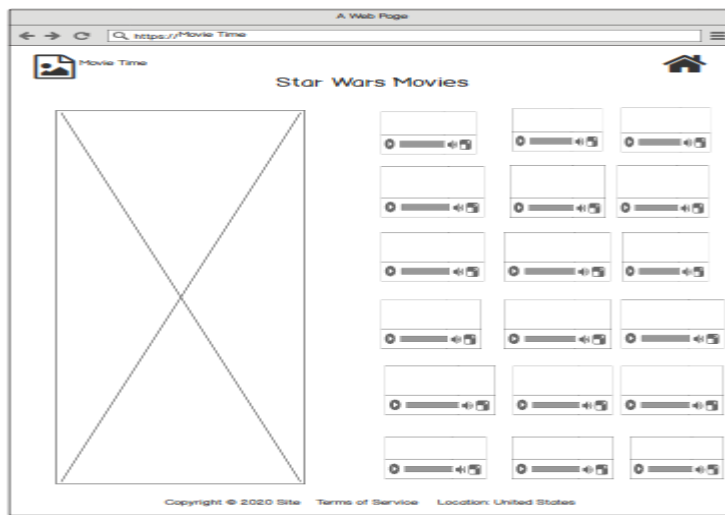

-I will use JS and API for movie search by name.

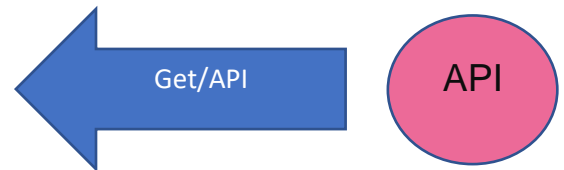

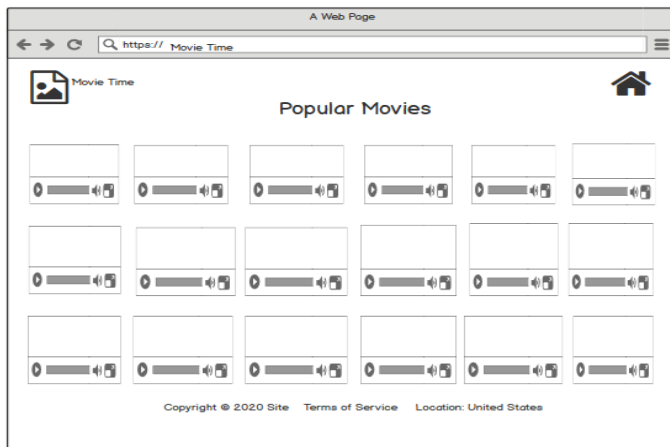

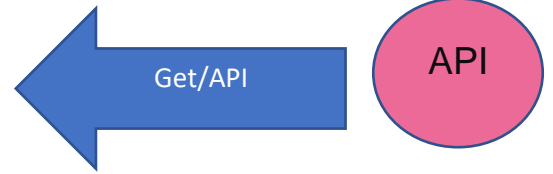

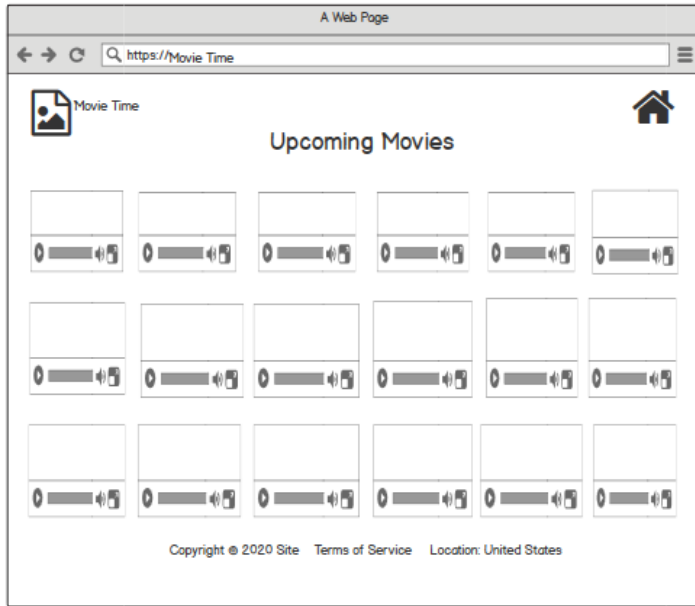

A search bar with the placeholder text "Search" inside a rectangular box, followed by a red rounded rectangular button with the text "Search" in white.

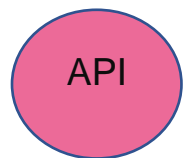

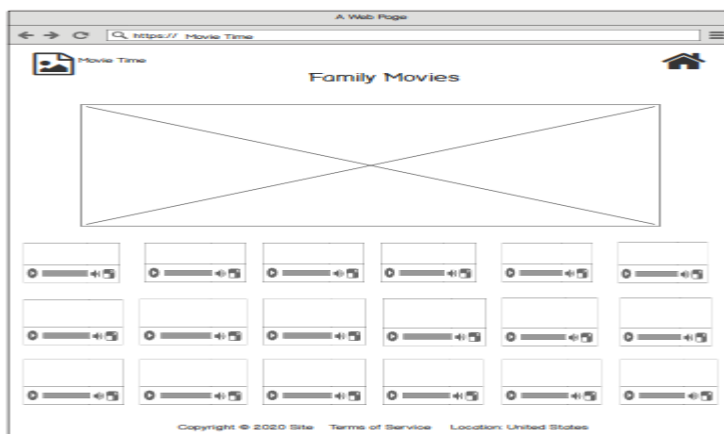

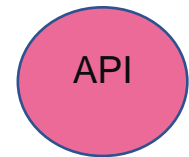

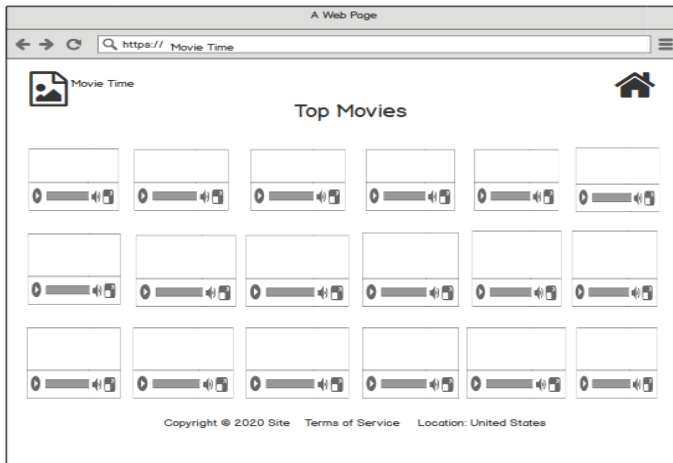

- User will create an account & login then user request is going to be made at the home page.
- Once a user has logged in. This is going to store the user's data in the database.

- For Movie pages and Famile movie pages, I will use API

HTTP VERBS

- POST - To create a resource on the server
- GET - To retrieve a resource from the server
- PUT - To change the state of a resource or to update it
- DELETE - To remove or delete a resource from the server
